In response to an amendment dated 06/25/04, a supplemental Office action issued as follow:

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

- a. See Figs. 1-16 where claims 1-34 and 42-58 are read on.
- b. See Fig. 19 where claims 39-41 are read on.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is considered as generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 2653

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. During a telephone conversation with Douglas P. Mueller on 06/25/04 a provisional election was made without traverse to prosecute the invention of group a, claims 1-34 and 42-58. Affirmation of this election must be made by applicant in replying to this Office action. Claims 39-41 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 3, 6, 9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Funato (US 6,072,579).

Art Unit: 2653

Funato, according to Figs. 1A-10, shows an optical apparatus comprising: a first light source (2) with a first wavelength (L2); a second light source (2) with a second wavelength (L1); a converging optical system (6); a diffractive element (9); and a photo detecting portion (10) including a first photo detecting portion (E-H) and a second photo detecting portion (A-D), and wherein when information reproduction is carried out by a light with the first wavelength (L2), signals obtained from regions (E-H) of the first photo detecting portion are calculated to detect a focus error signal (see column 7, lines 53-65), and when information reproduction is carried out by a light with the second wavelength (L1), signals obtained from regions (A-D) of the second photo detecting portion are calculated to detect a focus error signal (see column 7, lines 41-52), as recited in claim 3.

Regarding claim 6, see Figs. 7 and 8.

Regarding claim 9, see column 5, lines 22-28.

Regarding claim 11, the features recited in claim are inherently included in the apparatus of Funato in order to move the apparatus to access the disk and to rotate the disk.

6. Claims 1-6, 9-17, 20-28, 31-34 and 42-59 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Ohyama (US 6,512,608).

Ohyama, according to Figs. 2-24 clearly shown all features as recited in the instant claimed invention (see Figs. 2-24 and their respective disclosure for details).

Allowable Subject Matter

7. Claims 7, 8, 18, 19, 29 and 30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2653

8. Claims 7, 8, 18, 19, 29 and 30 are allowable over the prior art of record because the prior art of record, considered in combination or individually, fails to suggest or fair teach the use of all limitations as recited in each of claims 7, 18 and 29. claims 8, 19 and 30 are allowable with their respective parent claim.

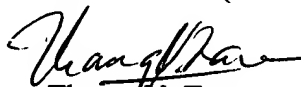

Response to Arguments

9. Applicant's arguments with respect to claimed invention have been considered but are moot in view of the new ground(s) of rejection.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thang V. Tran whose telephone number is (703) 308-1551. The examiner can normally be reached on Tuesday to Friday, from 7:30AM to 6:30PM.
